Kansas City, MO -- Fairbanks Scales introduces a powerful line of truck scales destined to change the industry. The release of the Titan Steel Deck truck scale turned out to be an event that has been the topic of conversation around every office water cooler. The impressive 100,000lb CLC/DTAC rating demonstrates that this is an extremely confident scale with few limitations. The simple fact that a 70X10 Titan has a steel weight of 33,000lb proves that Fairbanks spared no expense when designing this scale.

Not only is the Titan offered as an above ground permanent scale but it also comes in a portable model. The Titan portable truck scale also has all the same features and benefits of the Titan above ground scale. Fairbanks new "PV on the Spot" rental program will ensure you will never be left without a certified scale.

All Titan steel deck truck scales utilize rocker column load cells as the load receiving elements. This advanced proven technology is the cornerstone of Fairbanks long-established scale accuracy and durability. Our load cells are truly hermetically sealed with glass to metal welds that create a seal impervious to moisture intrusion. The entire load cell cable is armored with a stainless steel cable jacket for ultimate protection against rodents and fraying. Completely constructed out of stainless steel, the Titan load cell has a rated capacity of 100,000 lbs. with a 300% ultimate overload protection factor.

Every Titan truck scale is shipped with Fairbanks exclusive Intalogix Technology. This Technology uses a digital signal that is more than 1,000,000 times stronger than conventional signals. Intalogix is designed to eliminate voltage spikes and surges from lightning strikes. This is accomplished by optically isolating load cells from each other through transformer coupling the instrument and scale platform. This state-of-the-art technology provides the best surge voltage protection available today. A technology the competition doesn't even come close to.

For more than 170 years, Fairbanks Scales has met the world's weighing needs with dependable, high quality weighing equipment and superior service. Fairbanks' broad product line includes bench scales, counting scales, floor scales, truck scales, railroad track scales, weighing assemblies, batching instrumentation, indicators, intrinsically safe instrumentation, printers and complete weighing systems. To request more information or to obtain the name of the Fairbanks representative or authorized distributor nearest you, please call (800) 451-4107.

If it has to be right ... It has to be Fairbanks.
